

PROJECTS

**Location:** Kent

**Business Type:** Armed Services Benevolent Charity

**Project:** Internet Security

Our Client, a nationally recognised charity supporting members of the Armed Forces, their families, and other vulnerable and disadvantaged people, needed specialist assistance configuring and maintaining their Email Gateway and Security Firewall.

Working with their established team of Microsoft accredited IT support staff we were able to contribute our breadth of experience to reinforce their perimeter security and assist with the challenges they faced integrating multiple messaging systems to ensure a consistent and reliable flow of email until their systems were outsourced.
